Philanthropy and the Sustainable Development Goals

The United Nations' Sustainable Development Goals strive for global wellbeing through multi-level action. Each of these objectives presents significant challenges, such as poverty, hunger, education, health, social inequalities, employment and the environment. We must aim for a collaborative approach. This newsletter presents certain aspects of sustainable development. Philanthropic action, through its many partnerships with communities, contributes to the improvement of society, while also protecting the planet. This will allow us to live in harmony with the planet for as long as possible. After all, there is only one planet Earth! This special edition, led by PhiLab's Ontario Hub, brings together articles that make the connection between philanthropy and the Sustainable Development Goals.

Gestion des catastrophes naturelles en sol québécois : rendre socialement et écologiquement responsables les processus de développement des territoires affligés

"With environmental changes leading to increased climatic variations, we are witness to a multiplication of civil adaptation and security challenges. We are interested in Quebec's management of natural disasters. First of all, we cover the question of Quebec State's legal limitations. Next, we will go over the literature on territorial development. This will allow us to identify the space occupied by prevention when it comes to natural disasters." (Article in French only)
